Find data from LinkedIn by Name

If you have imported a list of companies from a source different than LinkedIn, (through a CSV) you can locate them in LinkedIn to scrape their information fields and search for leads.

🚨 If you don't have the company's LinkedIn URL, you can find them by **their name.** !! If it does not find it by name, it will search by domain (if any in the list).

Follow these steps:

1️⃣ Go to the list of **Companies** > select de companies
